Chapter 6: Photosynthesis - The Food Factory of Plants

Class 7 Science | EduBridge AI Sample Chapter

INTRODUCTION

Every living organism on Earth needs energy to survive, grow, and carry out life

WHAT IS PHOTOSYNTHESIS?

Photosynthesis is the process by which green plants, algae, and some bacteria

THE ROLE OF CHLOROPHYLL

The green colour of leaves is due to a special pigment called chlorophyll.

WHERE DOES PHOTOSYNTHESIS HAPPEN?

Photosynthesis occurs mainly in the leaves of plants. The main site of

THE TWO STAGES OF PHOTOSYNTHESIS

Photosynthesis occurs in two main stages:

FACTORS AFFECTING THE RATE OF PHOTOSYNTHESIS

The rate of photosynthesis can be affected by several factors:

WHY IS PHOTOSYNTHESIS IMPORTANT?

Photosynthesis is one of the most important processes on Earth. Here is why:

PHOTOSYNTHESIS VS. RESPIRATION

Students often confuse photosynthesis with cellular respiration.

SUMMARY -- KEY POINTS

1. Photosynthesis is the process of making food using sunlight, CO_2, and water.

IMPORTANT TERMS

- Photosynthesis: Making food from light

PRACTICE QUESTIONS

1. What are the raw materials needed for photosynthesis?
